

Gesture set for first version

	Back to home page
 	Prev / next page
	Add to favorites
	Show gesture memo (display available gestures with associated function)
   	Create, close, prev, next tab
	Read later ('save' gesture)
	Share ('send' gesture)
	Toggle Fullscreen
 	Top, bottom page
	Multiselection : multitouch gesture (3 or more contact points)
 	Increase, decrease text font size
	Search text in current page
	Select text within the square

 Long press action at the end of the gesture to repeat the action

Straight lines,
requires DGIL's dynamic mode (velocity criterion)
Will need more investigation on our side

- Remarks :
- a button in the UI is necessary to enable/disable the gesture feature easily, since it could be annoying on certain web pages
 - you have the repeat function on certain gestures with a long press at the end of the gesture (Prev/Next, zoom, ...)
 - for the tab creation function, we think it could be better to open an empty page
 - the « increase, decrease text font size » is close to what you are doing in your « reading » mode
